Discussion	
Closing remarks	Dr. Milena Foerster (FRA) Dr. Steffen Schubert (GER)

Outline

The educational workshop for tattoo artists will interactively elaborate comprehensive scientific and medical knowledge on the subject of and around permanent tattoos together with international experts of various sectors, including scientists, dermatologists, epidemiologists, tattoo artists and tattoo ink manufacturers. This knowledge will be transformed into practical recommendations for tattoo & PMU artists in order to avoid adverse skin reactions of their customers and to protect them from harm as far as possible. The areas covered are infections and hygiene, allergic and non-allergic adverse skin reactions to tattoo ink, chemical hazards of tattoo ink and aftercare, preventive measures, consequences of the EU tattoo REACH regulation for tattoo artists, skin cancer identification, tattooists' behaviour and tattoo studio equipment.

Workshop participants will receive an ESTP certificate of attendance.
